# Kings Meadow Primary School
# Science Curriculum Aims

Science teaching at Kings Meadow opens up new ways of thinking which complement and / or challenge established ideas and knowledge. This will support our children to become the scientific innovators of the future.

Throughout our science teaching and learning we encourage our pupils to ask 'how' and 'why' questions, with the aim of finding out the answers.

Practical experiments and investigations are central to our science teaching at Kings Meadow. We teach our pupils the importance of 'Working Scientifically' to become problem solvers.

At Kings Meadow we believe that science nurtures pupils' natural curiosity and helps develop inquiring minds. This leads pupils on a journey of discovery, as they link isolated facts to form a coherent narrative about the natural world.

Through our Science curriculum our pupils learn about interdependence and the inter-connected nature of life.
